1 Introduction and Safety

1.1 Introduction

Purpose of this manual

The purpose of this manual is to provide necessary information for:

- Installation
- Operation
- Maintenance

CAUTION:

Read this manual carefully before installing and using the product. Improper use of the product can cause personal injury and damage to property, and may void the warranty.

NOTICE:

Save this manual for future reference, and keep it readily available at the location of the unit.

1.2 Safety

WARNING:

- The operator must be aware of safety precautions to prevent physical injury.
- Operating, installing, or maintaining the unit in any way that is not covered in this manual could cause death, serious personal injury, or damage to the equipment. This includes any modification to the equipment or use of parts not provided by Xylem. If there is a question regarding the intended use of the equipment, please contact a Xylem representative before proceeding.
- Do not change the service application without the approval of an authorized Xylem representative.

CAUTION:

You must observe the instructions contained in this manual. Failure to do so could result in physical injury, damage, or delays.

1.2.1 Safety message levels

About safety messages

It is extremely important that you read, understand, and follow the safety messages and regulations carefully before handling the product. They are published to help prevent these hazards:

- Personal accidents and health problems
- Damage to the product
- Product malfunction

Definitions

Safety message level	Indication
 DANGER:	A hazardous situation which, if not avoided, will result in death or serious injury

Safety message level	Indication
 WARNING:	A hazardous situation which, if not avoided, could result in death or serious injury
 CAUTION:	A hazardous situation which, if not avoided, could result in minor or moderate injury
 Electrical Hazard:	The possibility of electrical risks if instructions are not followed in a proper manner
NOTICE:	• A potential situation which, if not avoided, could result in undesirable conditions • A practice not related to personal injury

1.2.2 User safety

General safety rules

These safety rules apply:

- Always keep the work area clean.
- Pay attention to the risks presented by gas and vapors in the work area.
- Avoid all electrical dangers. Pay attention to the risks of electric shock or arc flash hazards.
- Always bear in mind the risk of drowning, electrical accidents, and burn injuries.

Safety equipment

Use safety equipment according to the company regulations. Use this safety equipment within the work area:

- Hard hat
- Safety goggles, preferably with side shields
- Protective shoes
- Protective gloves
- Gas mask
- Hearing protection
- First-aid kit
- Safety devices

NOTICE:

Never operate a unit unless safety devices are installed. Also see specific information about safety devices in other chapters of this manual.

Electrical connections

Electrical connections must be made by certified electricians in compliance with all international, national, state, and local regulations. For more information about requirements, see sections dealing specifically with electrical connections.

Precautions before work

Observe these safety precautions before you work with the product or are in connection with the product:

- Provide a suitable barrier around the work area, for example, a guard rail.
- Make sure that all safety guards are in place and secure.

- Make sure that you have a clear path of retreat.
- Make sure that the product cannot roll or fall over and injure people or damage property.
- Make sure that the lifting equipment is in good condition.
- Use a lifting harness, a safety line, and a breathing device as required.
- Allow all system and pump components to cool before you handle them.
- Make sure that the product has been thoroughly cleaned.
- Disconnect and lock out power before you service the pump.
- Check the explosion risk before you weld or use electric hand tools.

Precautions during work

Observe these safety precautions when you work with the product or are in connection with the product:

- Never work alone.
- Always wear protective clothing and hand protection.
- Stay clear of suspended loads.
- Always lift the product by its lifting device.
- Beware of the risk of a sudden start if the product is used with an automatic level control.
- Beware of the starting jerk, which can be powerful.
- Rinse the components in water after you disassemble the pump.
- Do not exceed the maximum working pressure of the pump.
- Do not open any vent or drain valve or remove any plugs while the system is pressurized. Make sure that the pump is isolated from the system and that pressure is relieved before you disassemble the pump, remove plugs, or disconnect piping.
- Never operate a pump without a properly installed coupling guard.

1.2.3 Wash the skin and eyes

Follow these procedures for chemicals or hazardous fluids that have come into contact with your eyes or your skin:

Condition	Action
Chemicals or hazardous fluids in eyes	1. Hold your eyelids apart forcibly with your fingers. 2. Rinse the eyes with eyewash or running water for at least 15 minutes. 3. Seek medical attention.
Chemicals or hazardous fluids on skin	1. Remove contaminated clothing. 2. Wash the skin with soap and water for at least 1 minute. 3. Seek medical attention, if necessary.

1.3 Protecting the environment

Emissions and waste disposal

Observe the local regulations and codes regarding:

- Reporting of emissions to the appropriate authorities
- Sorting, recycling and disposal of solid or liquid waste
- Clean-up of spills

Exceptional sites

CAUTION: Radiation Hazard

Do NOT send the product to Xylem if it has been exposed to nuclear radiation, unless Xylem has been informed and appropriate actions have been agreed upon.

Recycling guidelines

Always follow local laws and regulations regarding recycling.

Waste and emissions guidelines

Do not dispose of equipment containing electrical components together with domestic waste.

Collect it separately in accordance with local and currently valid legislation.

2 Transportation and Storage

2.1 Examine the delivery

2.1.1 Examine the package

1. Examine the package for damaged or missing items upon delivery.
2. Record any damaged or missing items on the receipt and freight bill.
3. If anything is out of order, then file a claim with the shipping company.
If the product has been picked up at a distributor, make a claim directly to the distributor.

2.1.2 Examine the unit

1. Remove packing materials from the product.
Dispose of all packing materials in accordance with local regulations.
2. To determine whether any parts have been damaged or are missing, examine the product.
3. If applicable, unfasten the product by removing any screws, bolts, or straps.
Use care around nails and straps.
4. If there is any issue, then contact a sales representative.

2.2 Unit handling

WARNING:

Assembled units and their components are heavy. Failure to properly lift and support this equipment can result in serious physical injury and/or equipment damage. Lift equipment only at the specifically identified lifting points. Lifting devices such as eyebolts, slings, and spreaders must be rated, selected, and used for the entire load being lifted.

WARNING: Crush Hazard

Always lift the unit by its designated lifting points.
Use suitable lifting equipment and ensure that the product is properly harnessed.
Wear personal protective equipment.
Stay clear of cables and suspended loads.

hydrovar X Smart Pump Product Line (e-SVX, e-HMX, and e-SVX)

e-SVX

e-HMX

e-SHX

2.3 Storage guidelines

Storage location

The product must be stored in a covered and dry location free from heat, dirt, and vibrations.

NOTICE:

Protect the product against humidity, heat sources, and mechanical damage.

NOTICE:

Do not place heavy weights on the packed product.

Ambient temperature

Store this product at an ambient temperature between -40F (-40C) and +158F (+70C) and a relative humidity of 90% at +86F (+30C).

3 Product Description

3.1 General description

This product is a variable speed pump unit equipped with the hydrovar X smart motor. The unit may be installed vertically or horizontally in accordance with the acceptable installation configurations of the individual pump products listed in this document. The unit is non self-priming.

3.2 Intended use

The product can be used to pump:

- Chemically and mechanically non-aggressive liquids
- Cold water
- Hot water

Refer to the standard installation, Operation, and Maintenance Manual for pump design specifications.

The variable speed pump units are made for the following applications:

- Pressure, level, and flow regulation applications,
- Single and multi-pump irrigation systems.

3.2.1 Control modes

Actuator	The unit works as a constant-speed actuator, varying the motor speed according to an external speed signal or to one or more programmed speeds. Actuator mode can only be used for one unit in single operation.
Constant Pressure	The unit maintains constant pressure regardless of flow variation. The pressure feedback is read through a sensor connected to an analog input or through fieldbus.
Proportional Pressure	The unit increased the pressure setpoint (actual required value) in a linear manner in proportion to the flow. The flow can be approximated using the motor speed or measured using a flow sensor connected to an analog input or through fieldbus. The pressure feedback is read through a sensor connected to an analogue input or through fieldbus.
Proportional Quadratic Pressure	The unit increased the pressure setpoint (actual required value) in a quadratic manner in proportion to the flow. The flow can be approximated using the motor speed or measured using a flow sensor connected to an analog input or through fieldbus. The pressure feedback is read through a sensor connected to an analogue input or through fieldbus.
Constant Flow	The unit varies the motor speed to keep a constant flow. The flow feedback is read through a sensor connected to an analogue input or through fieldbus.
Constant Temperature	The unit varies the motor speed to keep a constant temperature. The temperature feedback is read through a sensor connected to an analogue input or through fieldbus.
Constant Level	The unit varies the motor speed to maintain a constant level, for example of a tank or well. The level feedback is read through a sensor connected to an analogue input or through fieldbus.

3.3 Improper use

Do not use this pump to handle explosive or flammable liquids.

Do not use this pump to handle abrasive, solid, or fibrous substances.

Do not use this pump to handle chemicals not compatible with the materials of construction of the pump.

3.4 Data plates

The data plate is a label showing:

- The main product details
- The identification code

Approval and certifications

For the approvals see the motor data plate.

3.4.1 hydrovar X nameplates

Motor data plate

1. Certification markings (CE, UKCA, UL recognized)
2. Motor type
3. Motor code
4. Unique motor serial number
5. Voltage range
6. Output power (kW/HP)
7. Full load rated PDS efficiency (motor and drive combined efficiency)
8. Frequency compatibility
9. Full load rated speed
10. Full load rated current range
11. Power factor
12. Insulation class
13. Ambient operating temperature
14. Non-drive end bearing
15. Service factor
16. IP environmental protection rating
17. NEMA environmental protection rating
18. Weight
19. Drive end bearing
20. Duty cycle rating
21. Circuit protection requirement

Inverter (drive) data plate

The diagram shows a rectangular data plate for an inverter. It is divided into several sections. At the top, there are fields for 'Type:', 'Code:', and 'S/N:'. Below these, there are two main columns: 'Input' and 'Output'. Each column has fields for 'V:', 'f:', and 'I1max:' (for input) or 'V:', 'f:', and 'I2max:' (for output). To the right of these columns is a QR code. At the bottom, there is a field for 'Tamb:' and a note 'Use in Pollution degree 2 Environment'. The plate is labeled with a vertical text 'XM_M0022_A_ot' on the right side.

1. Type
2. Input
3. Code
4. Output
5. S/N
6. Tamb

1. Model
2. Input operating limits
3. Identification code
4. Output operating limits
5. Serial number
6. Room temperature range

3.4.2 Pump nameplates

e-HMX Nameplate

The diagram shows a rectangular nameplate for a Goulds e-HMX Horizontal Multistage pump. It features the Goulds Water Technology logo and 'a xylem brand' text. The nameplate is divided into several sections. At the top, there is a field for 'GPM' (ABC) and 'FEET' (ABC). Below these, there is a field for 'RPM' (3600) and 'HP' (ABCD). To the right of these fields is a field for 'DO NOT OPERATE AT CLOSED DISCHARGE'. Below this, there is a field for 'PSI MAX' (ABC) and 'AB Hz'. To the right of this, there is a field for 'MANUFACTURED IN USA' and 'ABC °F FLUID MAX'. At the bottom, there is a field for 'SINGLE PHASE - AMB TEMP -15°C TO 45°C' and 'THREE PHASE - AMB TEMP -15°C TO 50°C'. The nameplate also includes the text 'XYLEM INC. 1 GOULDS DR. AUBURN, NY USA' and 'www.xylem.com/goulds'. The plate is labeled with a vertical text 'XM_M0022_A_ot' on the right side.

1. Goulds Catalog Number

5	M4x12 hex socket button-head screws (x6)	N/A	22.1 in-lb (2.5 Nm)

Other components and options

Table 4: Other components and options

Component	Description
Compatible sensors	The following sensors can be used with the unit: • Pressure • Temperature • Flow • Level
Factory-provided sensors	Pressure (x1)

4 Installation

4.1 Mechanical installation

4.1.1 Installation area

DANGER:

Potentially explosive atmosphere hazard. The operation of the unit in environments with potentially explosive atmospheres or with combustible dusts (e.g.: wood dust, flour, sugars and grains) is strictly forbidden.

Do not use the unit to handle hazardous or flammable liquid.

WARNING:

- Always wear personal protective equipment.
 - Always use suitable working tools.
 - When selecting the place of installation and connecting the unit to the hydraulic and electric power supplies, strictly comply with current regulations.
 - Ensure that the environmental / ingress protection rating of the unit (Type 3R, IP 55) is suitable for the installation environment.
 - Do NOT install this pump in swimming pools or marine areas. Failure to follow these instructions could result in serious personal injury, death and/or property damage.
-

CAUTION:

- Environmental / ingress protection: to ensure the Type 3R (IP55) protection index is achieved, make sure that the unit is closed correctly.
 - Before opening the terminal box cover, make sure that there is no water in the unit.
 - Make sure that all unused cable glands and cable holes are correctly sealed.
 - Make sure that the plastic cover is correctly closed.
 - Do not leave the terminal box without a cover to avoid the risk of damage due to contamination.
 - Risk of electrical shock or burn. The equipment manufacturer has not evaluated this unit for use in swimming pools.
 - This pump has been evaluated for use with water only.
-

4.1.2 Unit installation

- Position the unit as shown in Figure 4.
- Install the unit according to the liquid flow of the system.
- The arrows on the pump body indicate the flow and the rotation direction.
- The standard rotation direction is clockwise (looking at the fan cover).
- Always install a backflow-prevention device on the suction side.
- Always install the pressure sensor on the delivery side, after the check valve.

Figure 4: Permitted positions

Minimum spacing

Condition	Free distance surrounding motor
To permit inspection and removal of the motor	≥ 12 in. [300 mm]
To ensure proper ventilation and cooling	≥ 4 in. [100 mm]

4.2 Hydraulic installation

- Install a pressure relief valve sufficient to limit the system pressure below the maximum working pressure of the pump and tank (the minimum of the two). The pressure relief valve must be plumbed to a drain to prevent damage due to flooding.
- Check that the sum of the pressure intake (for example, for the connection with a municipal line or pressure tank) and the maximum pressure of the pump does not exceed the value of the maximum permitted operating pressure of the controller or of the pump (the minimum of the two).
- In cases where the water level is below the suction of the pump (lifting water), install a check valve (foot valve) on the suction of the pump to make sure that the pump stays primed.
- Install a gate valve to allow maintenance of the controller and pump or of the pressure tank.
- It is advisable to install a tap for use during commissioning of the system if there is not already an outlet near the pump.
- The controller plus electric pump can be used to connect the system directly to the municipal supply line or to take water from a primary water supply tank.
- If connecting to a municipal supply, follow the applicable provisions set by the authorities having jurisdiction.
- It is advisable to install a pressure switch on the suction side for turning off the pump if there is low pressure in the in-coming supply line. Protects against dry running.
- If connecting to a primary water supply tank, it is advisable to install a float for turning off the pump when there is no water. Protects against dry running.
- Refer to the instruction manual of the pump for further information.

The following images show a single pump system and a multi-pump system respectively.

Figure 5: Single-pump system

Figure 6: Multi-pump system

1. Pump with hydrovar X smart motor
2. Diaphragm pressure tank
3. Distribution panel
4. On-Off valve
5. Check valve
6. Low water control
7. Pressure gauge
8. Pressure sensor
9. Drain tap

Pressure tank

On the pump delivery side there is a diaphragm pressure tank, which gives the possibility of maintaining the pressure inside the piping when the system is not being used. The unit stops the pump from continuing to run at zero demand and reduce the size of the tank that is required for supply purposes.

Select a tank suitable for the system pressure, and pre-load it in accordance with the values indicated in the Quick Start Guide.

4.3 Electrical installation

4.3.1 Precautions

General precautions

Before starting, make sure that the safety instructions shown in the Introduction and Safety chapter have been fully read and understood.

DANGER:

The connection to the electric power supply must be completed by an electrician possessing the technical-professional requirements outlined in the current regulations.

WARNING:

Always wear personal protective equipment.

WARNING:

Always use suitable working tools.

WARNING:

When selecting the place of installation and connecting the unit to the electric power supplies, strictly comply with current regulations.

Electrical measures

Electrical Hazard:

Before starting work, check that the electric power supply is disconnected and locked out, to avoid unintentional restart of the unit, the control panel and the auxiliary control circuit.

NOTICE:

The mains voltage and frequency must match the values indicated on the drive data plate.

Ground

Electrical Hazard:

Always connect the external protection conductor (ground) to the ground terminal before attempting to make any other electrical connections.

Electrical Hazard:

Connect all the electrical accessories of the unit to the ground.

Electrical Hazard:

Check that the external protection conductor (ground) is longer than the phase conductors. In case of accidental disconnection of the unit from the phase conductors, the protection conductor must be the last one to detach itself from the terminal.

**Electrical Hazard:**

Install suitable systems for protection against indirect contact, in order to prevent lethal electric shocks.

4.3.2 Electrical connection guidelines

Check that electrical leads are protected against:

- High temperature
- Vibrations
- Collisions
- Liquids

Check that the power supply is provided with:

- A short circuit protection device of appropriate size.
- A mains disconnection device with contact opening distance ensuring complete disconnection for undervoltage III category conditions.

4.3.3 Control panel guidelines

NOTICE:

The control panel must match the ratings on the unit data plate.

4.3.4 Fuses and/or circuit breakers

- An electronically activated drive function ensures motor overload protection. The overload protection function calculates the increment level in order to activate the timing of the trigger function (motor stop).
- The drive must be protected against overcurrent and short-circuit protection to prevent the overheating of the power supply cables. Line fuses or circuit breakers must be installed to ensure this protection. Fuses and circuit breakers must be provided by the installer as part of the installation.
- Use the recommended fuses and/or circuit breakers on the power supply side as protection in the event of drive component failure (first failure). The use of the recommended fuses and circuit breakers ensures that possible damage to the drive is limited to the inside of the same. For other types of protection, ensure that the passing energy is equal to or less than that of the recommended models.
- The fuses shown in the table are suitable for use on a circuit capable of releasing 5000 Arms (symmetrical), maximum 480 V. With the indicated fuses, the short-circuit current rating (SCCR) for the drive is 5000 Arms.

4.3.5 Residual current devices, RCD (GFCI)

When using ground fault circuit breakers, GFCI, or residual current devices, RCD, also known as automatic earth leakage circuit breakers, ELCD, check that:

- They are suitably sized for the system configuration and environment of use
- They have a starting delay to prevent faults caused by transient ground currents
- They can detect alternate or direct current, they are marked with the symbols shown in the figure.

NOTICE:

When using an automatic earth leakage switch or a ground fault switch, make sure to consider the total earth leakage current of all the electric devices of the system.

4.4 Drive guidelines

4.4.1 Drive assembly

1. Motor
2. Drive
3. Fastening screw
4. Seal

1. Lubricate the seal with alcohol.
2. Move the drive close to the motor.
3. Tighten the screws with a Torx spanner.

Tightening torque:

- Size B and C: 6 Nm (55 lbf·in) $\pm$ 15%
- Size D: 8 Nm (70 lbf·in) $\pm$ 15%

4.4.2 Power supply connection

1. Drive
2. Terminals

3. Cover screws
4. Phase conductors
5. Cable gland
6. Power supply cord
7. Protection conductor (ground)
8. Cover
9. Additional ground connection

4.4.3 Power cable installation

1. Remove the cover and observe the wiring diagrams inside.
2. Insert the power cable in the cable gland.
3. Tightly connect the conductors, making sure that the protection one is longer than the phase ones.

For size D only, tighten the terminal screws with a Pozidriv screwdriver.

Tightening torque: 4 Nm (35 lbf-in)

4. Tighten the cable gland.
 5. Fit the cover and tighten the screws.
- Tightening torque: 3 Nm (27 lbf-in) $\pm$ 15%

4.4.4 Auxiliary connections

Figure 7: Auxiliary connections

Table 5:

Position number	Name	Description	Default setting
1	Analog input 1	Power supply +24 VDC, max. 60 mA (total, terminals 1 + 5)	Pressure sensor 1
2		Configurable analog input 1	
3		Electronic GND	
4	Reserved	For internal use, do not connect	-
5	Analog input 2	Power supply +24 VDC, max. 60 mA (total, terminals 1 + 5)	Not selected
6		Configurable analog input 2	
7		Electronic GND	
8	External Start/Stop	Digital start/stop input, internal pull-up +24 VDC, contact current 6 mA	-
9		Electronic GND

5 Operation

5.1 Precautions

In case of coexistence of two or more of the following conditions:

- high ambient temperature
- high water temperature
- duty points insisting on unit maximum power
- persisting undervoltage of mains,

the life of the unit may be jeopardized and/or derating may occur: for further information contact Xylem or the Authorised Distributor.

5.2 Wait times

Electrical Hazard:

Contact with electric components may cause death, even after the unit has been switched off. Before any interventions on the unit, the network voltage and any other input voltages must be disconnected for five minutes.

Electrical Hazard:

Frequency converters contain DC-link capacitors that can stay charged even when the frequency converter is not energized.

To avoid electrical hazards:

- Disconnect the AC power supply.
- Disconnect all types of permanent magnet motors.
- Disconnect all DC-link remote power supplies, including the battery backups, the Uninterrupted Power Supply units and the DC-link connections to other frequency converters.
- Wait five minutes for the capacitors to discharge completely before doing any maintenance or repairs.

6 System Setup and Operation

6.1 Programming precautions

NOTICE:

- Carefully read and adhere to the following instructions before starting the programming activities to avoid incorrect settings that can cause malfunctions.
- All modifications must be done by qualified technicians.

6.2 hydrovar X drive display and controls

Table 6:

Position number	Name	Function
1	Display	
2	ON/OFF button	• Start and stop the unit • Reset the errors by pressing for 5 seconds.
3	UP and DOWN arrow keys	• Move vertically between menu options • Perform a manual switch-over on a multi-pump system by pressing the DOWN arrow (extended pressure) • Rotate the display 180° by simultaneously pressing ENTER and the UP arrow (extended pressure).
4	RIGHT and LEFT arrow keys	• Move horizontally to navigate home screens and menus • Lock and unlock the display by simultaneously pressing the RIGHT and LEFT arrows (extended pressure).

Position number	Name	Function
5	SEND button	- Advancing through the menu levels - Confirm the selection of a parameter - Confirm the value of a parameter.
6	Unit LED on	Indicate that the unit is powered.
7	Unit status LED	Indicate: - Motor no powered (off) - Alarm active and motor stopped (yellow) - Unit error and motor stopped (red) - Motor started (green) - Alarm active and motor started (yellow alternating green).
8	Connection status LED	Indicate - BMS communication disabled (off) - BMS communication active (green) - Wireless communication with mobile device established (fixed blue) - Wireless communication with mobile device being established (flashing blue) - Wireless communication and BMS communication active (blue alternating green).
9	Multifunction button	- Access the parameter menu or additional functions according to the screen on the display. - Enable the unit to a mobile device (extended pressure)

6.3 Graphic display

Table 7:

Position number	Name	Description
1	Header bar	Shows static information and messages relating to the operating conditions, such as: • Alarms • Errors • Multi-pump operating.
2	Main screen	It shows the main information and allows the operating parameters to be changed. There are up to 5 screens, which can be navigated by pressing the RIGHT and LEFT arrow keys. The symbol next to an entry indicated an editable parameter.
3	Lower bar	Show: • On the left, the essential operating information, such as the actual adjustment value and the speed percentage at which the unit is operating • On the right, the buttons available for interaction in the main screen.

6.3.1 hydrovar X parameter menu

Table 8:

Position number	Name	Description
1	Header bar	It shows the parameter path at menu and submenu level.
2	Parameter list	Shows: • The idex, • The name, • The preview of the value of the parameters for the current menu level. To advance a level or change the value, press SEND or the RIGHT arrow key.

Position number	Name	Description
3	Lower bar	Shows: • On the left, the essential operating information, such as the actual adjustment value and the speed percentage at which the unit is operating • On the right, the buttons available for interaction in the main screen.

The menu is split into 3 levels:

- Main
- Submenu
- Parameters

To display or change a parameter:

1. Press the function button in the main screen.
2. Enter the password using the arrow keys.
3. Press SEND.

NOTICE:

After 10 minutes of inactivity, the password must be re-entered.

4. Press the RIGHT arrow key or SEND to advance between levels, or the LEFT arrow key to return.

6.3.2 Start the unit

NOTICE:

For first-time startup and programming, the unit is equipped with a start-up genie to select the appropriate operating mode and other parameters for the intended application.

1. Check the connection between the START/STOP and GND inputs on the terminal board.
2. Press ON/OFF to start the unit.

NOTICE:

if parameter 1.0.45 Autostart is configured to "Yes", it will not be necessary to press ON/OFF again at the next start.

3. With the unit in operation, the working setpoint can be changed by switching to the second screen.

6.3.3 Operating mode change for hydrovar X

The unit parameters are set at the factory and the unit is ready for use.

To change parameters and advanced features, access the configuration menu.

1. Press the multi-function button.
2. Enter the password using the arrow keys.
3. Press SEND.
4. Navigate through the menus to locate the parameter or function to be changed.

6.3.4 Error reset for hydrovar X

In the event of an error, the unit automatically makes several attempts to reset itself, where permitted: if the attempts are unsuccessful, the unit stops and the display shows the error code.

To eliminate the error:

1. Open the first main screen by pressing SEND.
2. Read the description of the error in the screen.
3. Identify the cause and follow the troubleshooting instructions.
4. Reset the error by pressing and holding down ON/OFF for 3 seconds: the unit returns to the status before the error.

6.4 Xylem X App

Introduction

Available for mobile devices with wireless technology operating system.

Use the App to:

- Check the status of the unit
- Configure parameters
- Interact with the unit and obtain data during installation and maintenance
- Generate a work report
- Contact the assistance service.

Download the App and connect the mobile device with the unit

1. Download the Xylem X App to the mobile device from App Store¹ or Google Play² by scanning the QR code:

2. Complete the registration.
3. On the drive display, press the wireless communication button.
4. Add the unit to the user profile.
5. When the connection has been established, the connection light turns steady blue. It is now possible to control the unit using the mobile device.

¹ Compatible with iOS® operating systems with version 15.0 and above.

² Compatible with Android operating system with version 10.0 and above.

7 Technical Specification

7.1 Operating environment

Non-aggressive and non-explosive atmosphere.

Temperature

-4° to 122°F (-20° to 50°C)

Relative air humidity

<50% at 104°F (40°C)

NOTICE:

If the humidity exceeds the stated limits, contact Xylem or the Authorized Distributor.

Elevation

<3280 ft (1000 m) above sea level.

NOTICE:

Tripping of the inverter's thermal protection. If the inverter is exposed to temperatures or installed at altitudes higher than those indicated, the unit's built-in automatic thermal protection function may intervene. If the unit is installed at an altitude exceeding 6600 ft (2000 m), contact Xylem or the Authorized Distributor.

7.2 Electrical specifications

See the data plate.

Permitted tolerances for the supply voltage

- 200-240 V $\pm 10\%$ 50/60 Hz
- 380-480 V $\pm 10\%$ 50/60 Hz

Leakage current

≤ 3.5 mA (AC).

Protection class

NEMA 4

7.3 Compliance of radio frequency characteristics

EU/EEA

Table 9:

Features	Description
Technology	Bluetooth® Low Energy 5.2 wireless technology
Band	2.4 GHz ISM
RF	≤ 4.5 mW (6.5 dBm)

USA

hydrovar X FCC ID: 2SYCGXSI03

The variable speed drive is compliant to Part 15 of the FCC Rules (FCC 15.247).

Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

The variable speed drive is considered like a mobile device, and it complies with the safety requirements for RF exposure in accordance with FCC rule part 2.1093 and KDB 447498 D01 as demonstrated in the RF exposure analysis.

Installers must ensure that (i) this device must not be co-located or operated in conjunction with any other antenna or transmitter except in accordance with FCC multitransmitter product procedures, (ii) during normal use, there is always a minimum distance of at least 20 cm.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Unauthorized repairs, changes or modifications could result in permanent damage to the equipment and void the warranty and your authority to operate the device under Part 15 of the FCC Rules.

Canada

hydrovar X ISED IC: 26881-XCI03

The variable speed drive is compliant to RSS-247.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

The variable speed drive is considered like a mobile device, and it complies with the safety requirements for RF exposure in accordance with RSS-102 Issue 5.

Installers must ensure that during normal use, there is always a minimum distance of at least 20 cm.

This device complies with ISED's license-exempt RSSs.

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

7.4 Characteristics of inputs and outputs

Features	Description
Communication ports	2, RS-485
Digital inputs (5)	• Floating/NPN contact, open manifold/drain open, to GND • Internal polarisation +24 VDC, current limited to 6 mA max. • Protection from -0.5 VDC to +30 VDC, ± 15 mA max.
Analog inputs (4)	• Configurable for 0-20 mA current, or 0-10 V voltage • 24V signal for sensor power supply with current limitation 60 mA.
Analog output	Configurable as either 0-20 mA current signal or 0-10 V voltage signal

Features	Description
Relay	2, with NC and NO changeover contact: - Relay 1 up to 240 VAC 0.25 A or 30 VDC 2 A - Relay 2 up to 30 VAC 0.25 A or 30 VDC 2 A

**WARNING:**

If relay 1 is connected to a voltage higher than 30 VAC, disconnect and do not use the terminals of relay 2.

7.5 Dimensions and weights

For motor-specific dimensional and weight data, refer to the hydrovar X motor specifications documents where motor drawings are available by speed range, voltage rating, power rating, frame type, and frame size. To understand the motor-pump pairing for a given product and its associated technical data, consult the product-specific technical brochure.

Motor Type	Voltage Range	Power (hp)	Motor Frame	Specification Document Number
EXM56/4.040BH2	380-480V	4	56	XY-hyXeXM-SUB-520

8 Cybersecurity

Xylem values system security and resilience. Defending against cybersecurity threats is a shared responsibility. Xylem builds products that are secure by design. Our customers have a responsibility to understand the risks inherent in their processes and take steps to operate and maintain their solutions securely. This section reviews security features and provides guidance to help securely operate this product. For details and updates on Xylem product cybersecurity visit xylem.com/security

8.1 Xylem product cybersecurity

Xylem performs appropriate due care in building security and resilience into products. Xylem performs the following security activities for defense-in-depth:

- Security engineers perform **threat modeling** to identify **testable controls**
- Code is scanned for flaws with **static analysis** tools and hardened
- **Product components are analyzed** and hardened
- Security controls are verified through **automated and manual tests**
- Xylem maintains relationships with customers, integrators, and the cybersecurity research community and the **Product Security Incident Response Team (PSIRT)** coordinates the collection, analysis, remediation, and responsible disclosure of vulnerability and remediation information to keep products secure
- Cloud connections, data flows, and cloud infrastructure are continuously monitored by the **Product Security Operations Center (PSOC)**
- Product security is **governed through a three lines of defense** model that includes: product developers, product security engineers, and audit staff

8.2 Security recommendations for end-user

Hydrovar X is developed considering security best practices. The following guidance provides recommendation for secure operations, hardening and account management. In the table below: *Safeguards* describe the security guidance, *Security Context & Rationale* provide overview of security features and value of the security safeguard, and *References* provide additional resources for further investigation for implementing the recommended safeguards.

Table 10:

Safeguard	Security Context & Rationale	References
Restrict physical access • Ensure physical access to assets is limited. Include physical isolation to protect the environment and equipment therein. • Ensure strict control over physical access in and out of the facility.	The communication ports have been hardened to restrict access and ensure integrity of device operations. This safeguard supports the ability to further limit exposure associated with physical threats to the device such as rogue/malicious device joining the Modbus RTU network over RS485 interface.	ATT&CK for ICS: M0801 NIST SP 800-53 Rev5: AC-3, PE-3 ISA/IEC 62443-3-3: SR 2.1

Safeguard	Security Context & Rationale	References
Ensure that the device is not exposed to internet, using below recommendations: • Implement firewall & define rules to protect device from Denial-of-service attempts. • Protect the network address information of device using Network Address Translation (NAT) technique.	This safeguard ensures that data and SCADA controls are not exposed to internet. This also helps in preventing Man-in-the-middle attacks when the device is accessed via Modbus over TCP/IP or BACnet IP. We recommend using network segmentation and segregation to minimize access to sensitive information for those systems and people who don't need it, while ensuring that the organization can continue to operate effectively.	ATT&CK for ICS: M0930 NIST SP 800-95 NIST SP 800-44 v2 ISA/IEC 62443-3-3: SR 5.1, SR 7.1
Ensure cybersecurity policies, awareness, and training to the operators, administrators and other personnel.	This safeguard prevents Social Engineering attacks and promotes awareness related to cybersecurity.	ATT&CK for ICS: M0917 NIST SP 800-53 Rev5: AT-2 ISA/IEC 62443-2-4: SP.01
Ensure patch management is done regularly and updated appropriately.	This safeguard prevents attacks related using components with known vulnerabilities. Sometime vulnerabilities are discovered, and we work with our partners to deploy updates to security and resilience. This safeguard mitigates exploitation risks and ensures security patching	ATT&CK for ICS: M0951 NIST SP 800-53 Rev5: MA-2 ISA/IEC 62443-2-3
Ensure hardening guidelines are implemented, only desired ports and services should be open, and RBAC should be followed.	This safeguard helps in prevention of attacks due to misconfigurations or default configurations.	ATT&CK for ICS: M0937, M0918, M0801 NIST SP 800-53 Rev5: AC-3(7), SC-7(5) ISA/IEC 62443-3-3: SR 2.1, SR 5.1
Ensure strong password policy is implemented and default credentials should not be used, passwords must be changed periodically.	This safeguard will help in prevention of passwords and account takeover attacks.	ATT&CK for ICS: M0927 NIST SP 800-53 Rev5: IA-5 ISA/IEC 62443-3-3: SR 1.7
Create and exercise disaster recovery plans.	hydrovar X has no way to perform back-ups of the current system configuration. A copy of the current configuration can be downloaded using the app. The configuration can be restored manually from this copy, or the configuration can revert to factory settings via Display or via Modbus. Defining this process provides system resilience, including against ransomware.	ATT&CK for ICS: M0953 NIST SP 800-53 Rev5: CP-10 ISA/IEC 62443-3-3: SR 7.4
Implement specific inventory, logging and monitoring of hardware and report security-related incidents to Xylem at product.security@xylem.com. These might include unexpected operations, confirmed tampering, or theft of the device.	Devices are hardened and Xylem provides PSIRT to help customers investigate potential security incidents. This safeguard supports the ability to track assets and recognize potential security events.	ATT&CK for ICS: M0947 NIST SP 800-53 Rev5: SM-8 ISA/IEC 62443-3-3: SR 1.11, SR 2.8, SR 3.4

3. ISA/IEC 62443 standards available for purchase from ISA, IEC, or ANSI.

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
